RECEPTION · HOTELS · OFFICES · SMART BUILDINGS

Apollo Speak

A small voice assistant that answers in about a second – without the cloud.

WHO IT IS FOR

Front desks, hotels, meeting rooms, showrooms and buildings that want a natural voice interface.

THE PROBLEM

Typical smart speakers send every word to the manufacturer's cloud and cannot be adapted to your business.

WHAT YOU GET

1. **Natural conversation**
   Say “Hey Apollo” and talk normally – answers start in one to two seconds.
2. **Runs on your own AI server**
   Speech recognition, the AI and the voice all run locally.
3. **Knows your business**
   Answers questions about your products, opening hours or building – in your words.
4. **Connects to the building**
   Can be linked to lighting, climate and other building systems.
5. **Compact device**
   Small display, built-in speaker and microphone, battery operation possible.

> **Why Apollo Innovation?** Our own firmware and our own server software – so the device does exactly what you need and nothing you don’t.

COMMON QUESTIONS

Does it listen all the time?
Only for its wake word – and nothing ever leaves your network.

Can it speak other languages?
Yes, English, German and more.
